FlyBot

Smart insect traps: the camera shoots, the AI counts

Follow fruit flies and other pests on every trap, every day, right on your phone.

Web · Phone · English and Vietnamese

THE PROBLEM

Checking traps by hand is slow and always behind the pests

Walking every trap, counting by eye

Each round takes hours of labour, and the count depends on who does it.

Scattered records

Notes on paper are hard to compare across traps, plots and weeks.

Spotted too late

By the time numbers look high, the outbreak has started and costs more to treat.

HOW IT WORKS

From trap card to decision, with no counting by hand

1

The camera shoots the trap

An EZVIZ camera takes photos on each trap's own schedule, daytime only if you like.

2

The AI finds and counts

It boxes every insect in the photo, with its species and confidence.

3

Daily catches

New insects per day and flies per trap per day, to compare.

4

Alerts and reports

An alert as soon as a threshold is reached; reports on a schedule.

PRODUCT TOUR

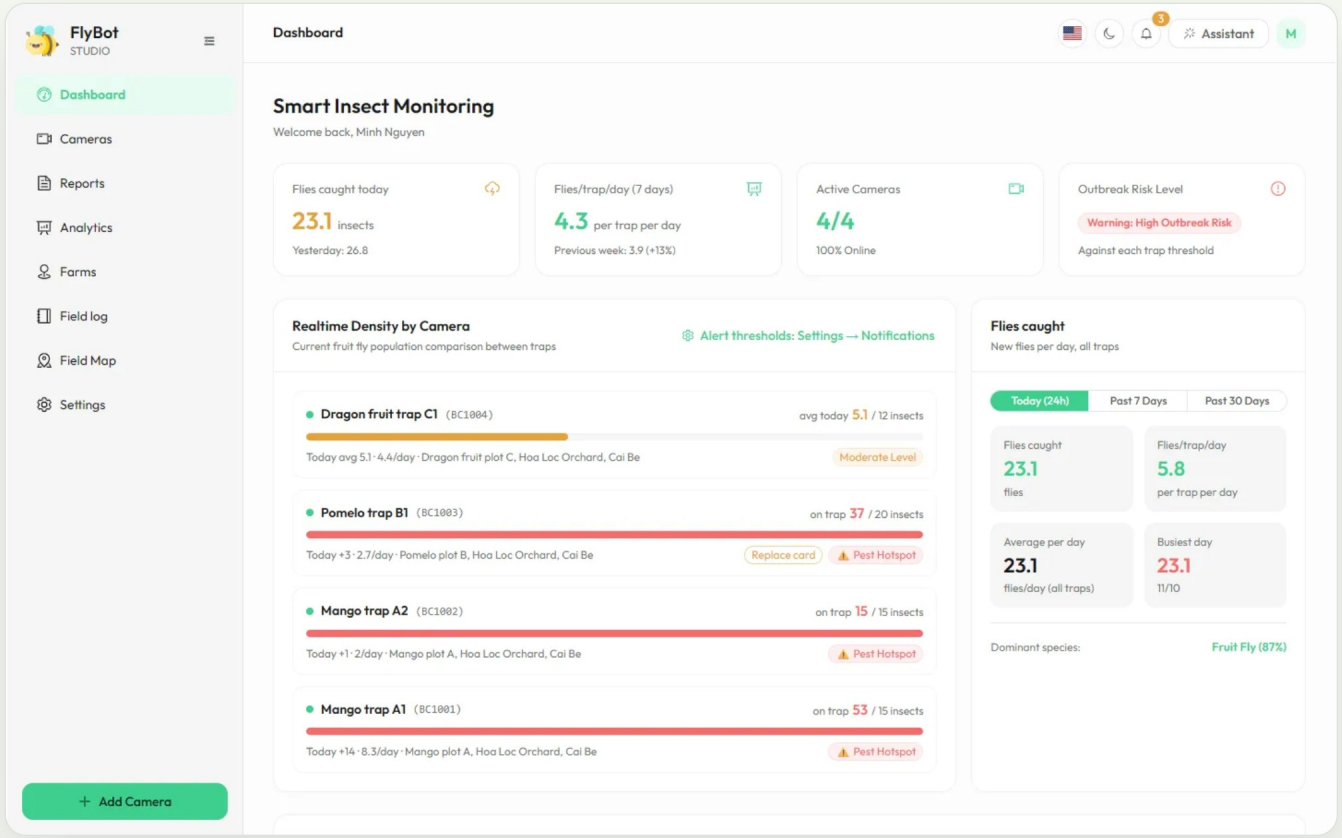

FlyBot in 74 seconds

A walk through the app: overview, AI detection, cameras, analytics, reports and the quick tour.

OVERVIEW

The whole farm on one screen

Catches today

New insects, not the running total on the sticky card.

Flies per trap per day

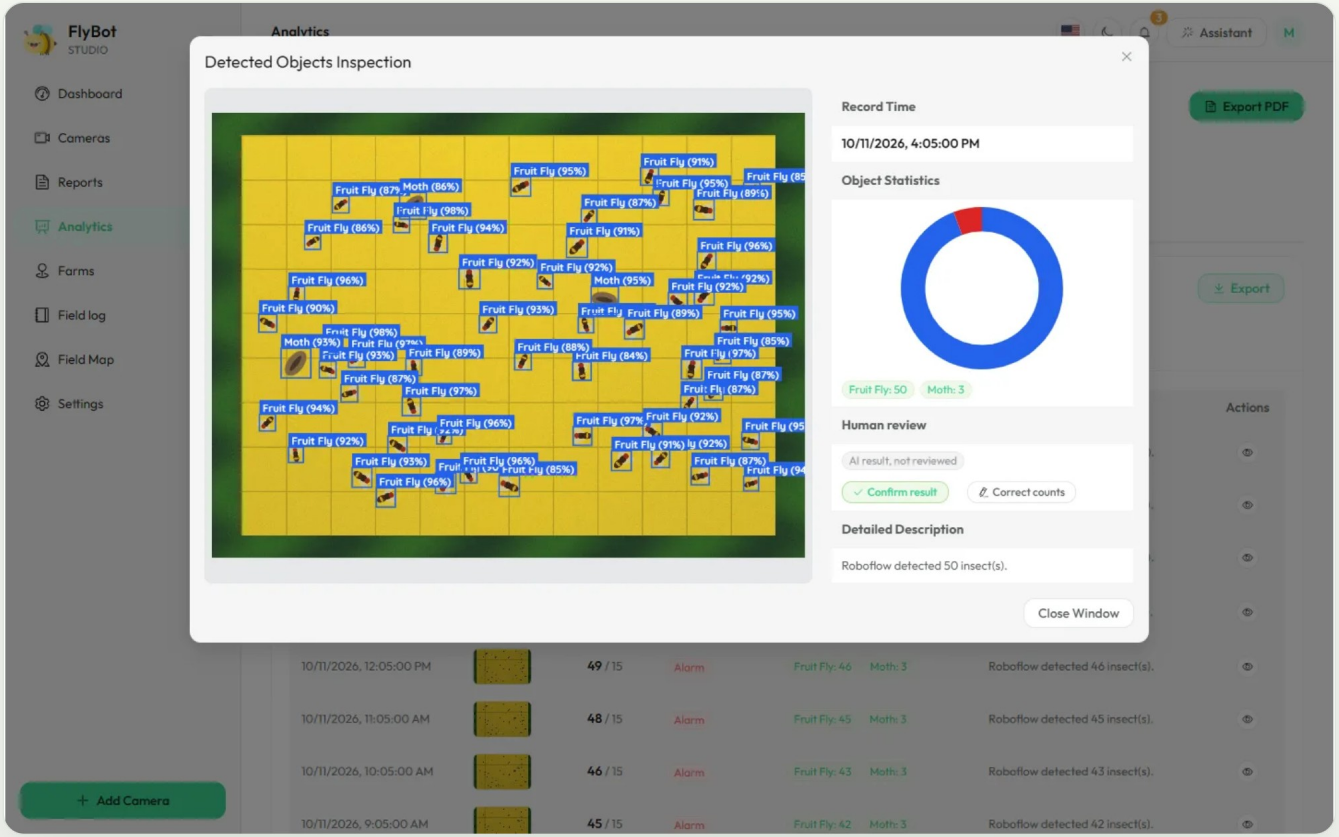

The standard figure to compare traps and weeks.

Risk for every trap

Against each trap's own threshold, with its latest AI photo.

AI DETECTION

Every insect boxed and named

Boxes and species

Each insect gets a box, a species and a confidence; counts by species.

People review

Confirm the result or correct the count right on the photo.

An AI that improves

Reviewed photos are sent to retrain the model.

TWO KINDS OF TRAP

Each kind of trap is read its own way

Sticky trap

Catches = the rise each day

The glue card keeps every insect it caught. FlyBot counts the new ones since yesterday, skips card-change days, and reminds you when a card is due.

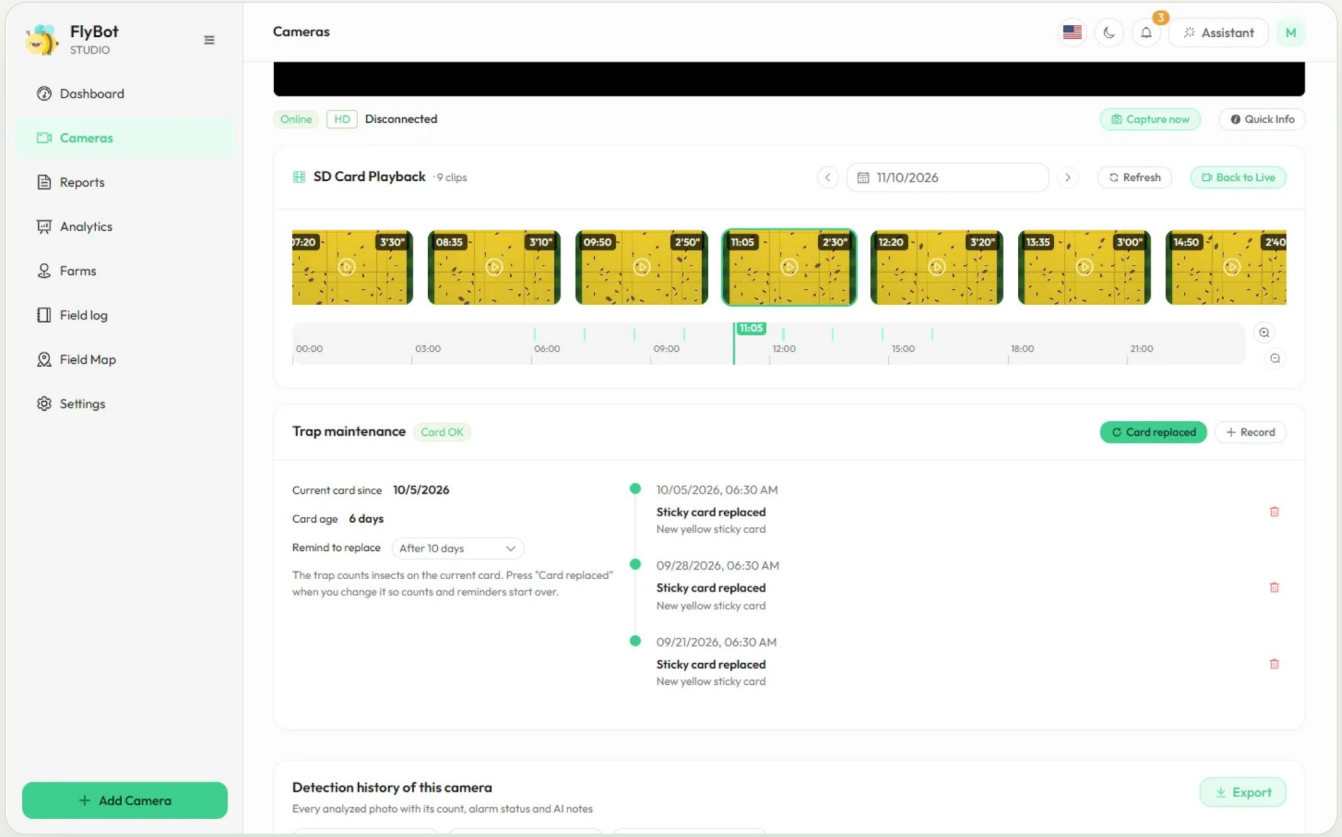

Lure trap

Judged by the day's average

Flies come and go, so FlyBot uses the average per photo over the day. One crowded photo no longer raises a false alarm.

CAMERAS

Watch live, play back and maintain traps

Live and snap now

Live video from the camera; take and analyze a photo when you need one.

Timeline playback

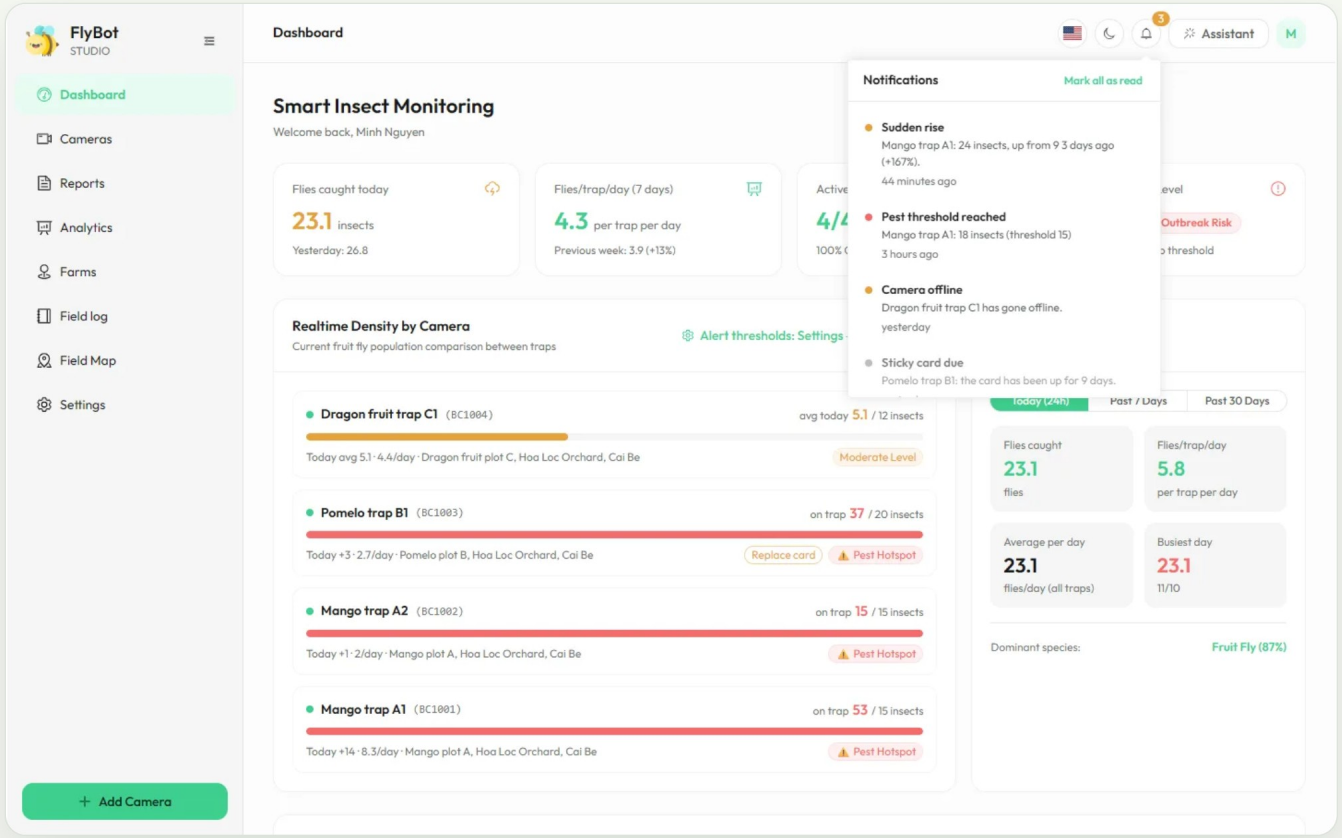

Memory card recordings laid out by hour, day by day.

Trap maintenance

Log card changes and get a reminder when one is due.

ALERTS

Know the moment you need to go out

At the right time

Trap threshold reached, sudden surge, camera offline, card due.

On the right channel

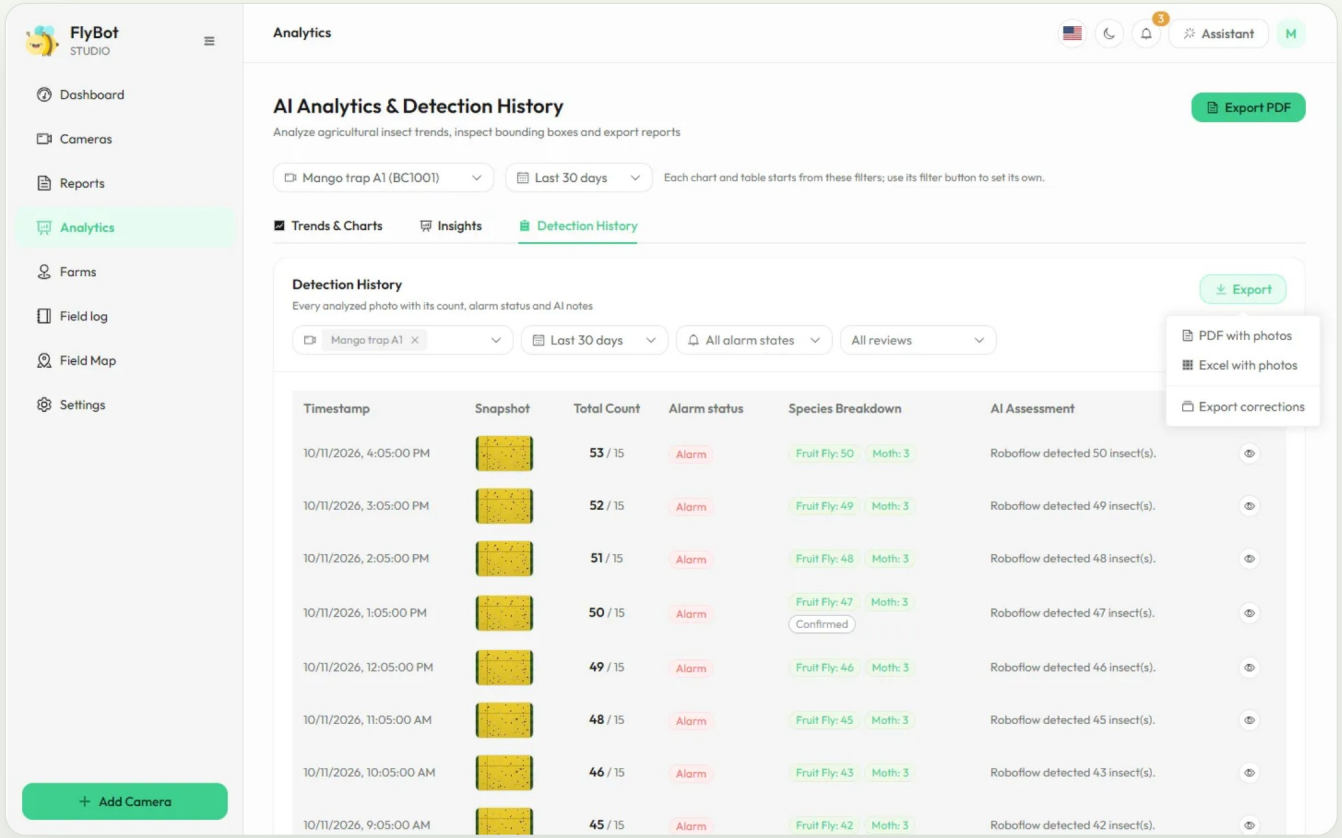

In the app, push, email, Telegram; a 6:30 morning brief if turned on.

Never noisy

Pick the alert types, quiet hours and a cool-down between alerts.

ANALYTICS AND HISTORY

Every photo, filtered and exported

In-depth analysis

Compare traps, temperature against catches, the busiest hours.

Filters that fit

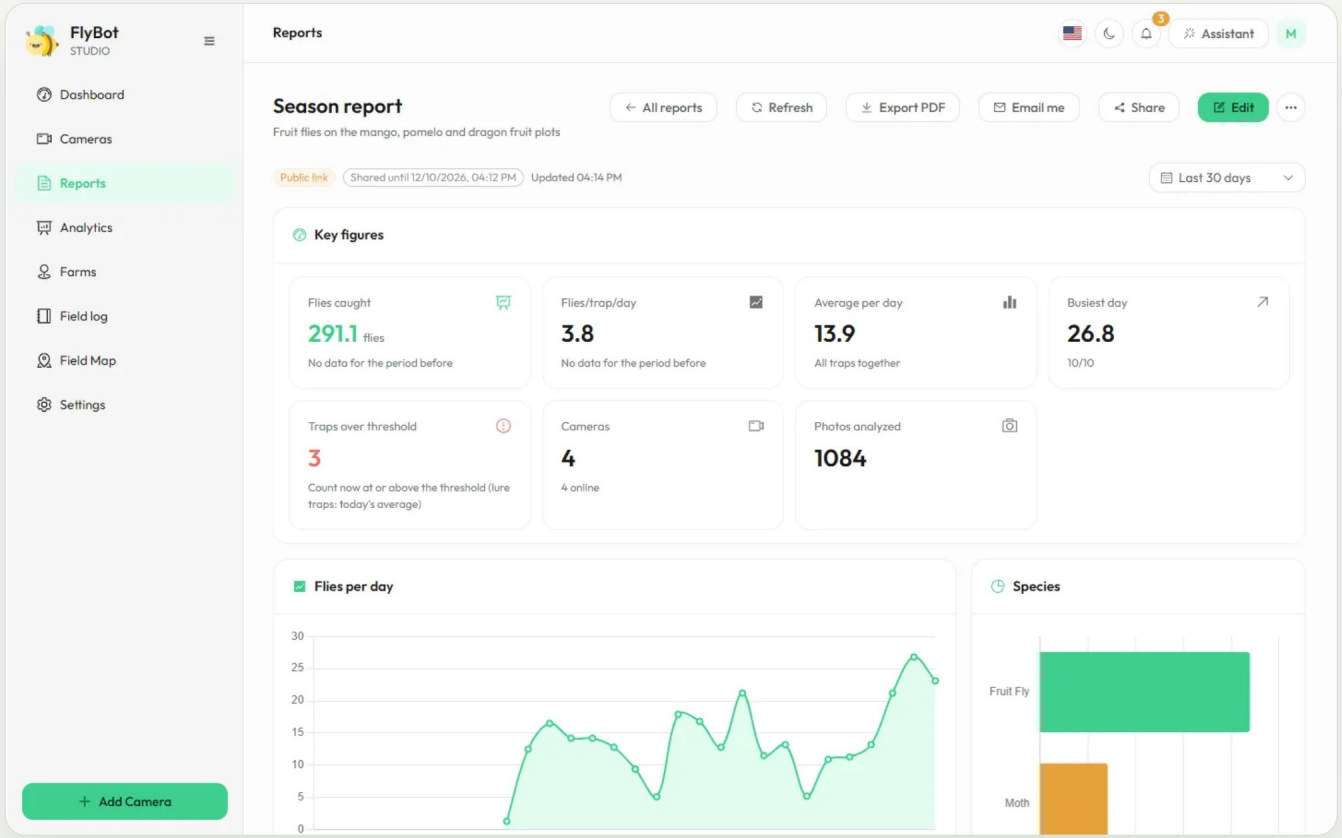

By camera, period, alert level and review status.

Export with photos

PDF and Excel with boxed photos, one sheet per camera.

REPORTS

Reports that build and send themselves

Pick the blocks

Figures, charts, tables; 7 days to 12 months, against the period before.

On a schedule

Weekly or monthly, with the PDF, by email and Telegram.

Sharing that ends

Share with colleagues or a public link that expires.

AI ASSISTANT

Ask in plain words; it looks up and acts

You ask

"Which trap is worst?"
"Did last week's spray work?"
"I replaced the card on trap A1."

It picks its tools

Trap figures, week-on-week, alerts, reports, logbook; looks at a photo; takes a photo, emails a report.

Answers and guides

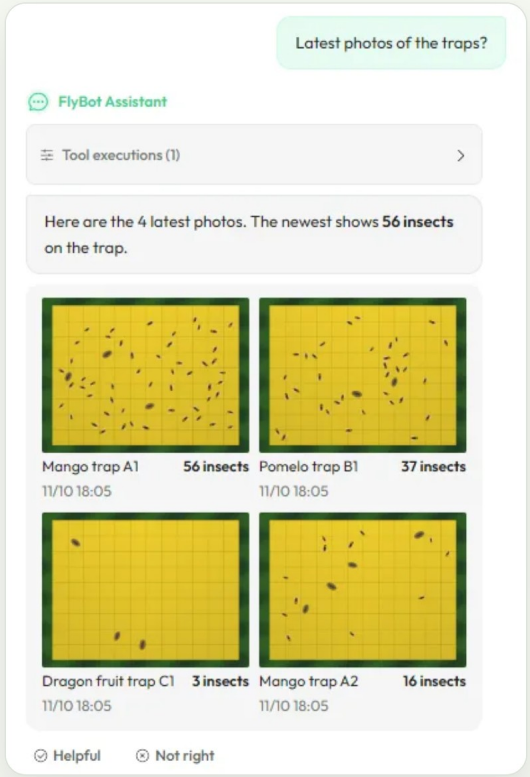

Streams its answer with photos and charts, opens the right screen. Changes are saved only on your Confirm.

The assistant only sees the cameras you may see, and never changes settings or accounts.

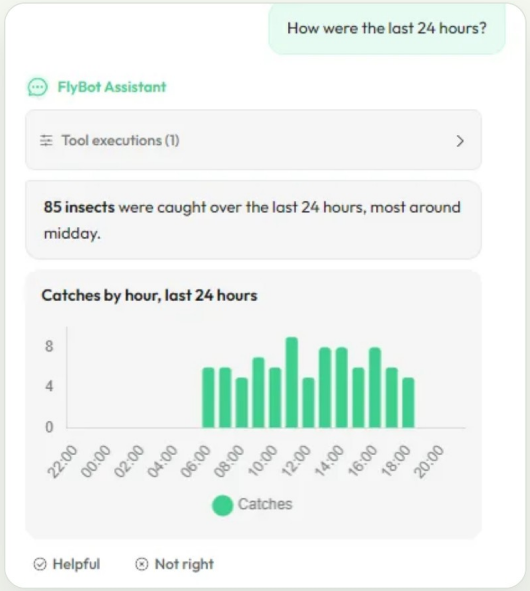

THE ASSISTANT IN THE APP

Answers with photos, charts and buttons

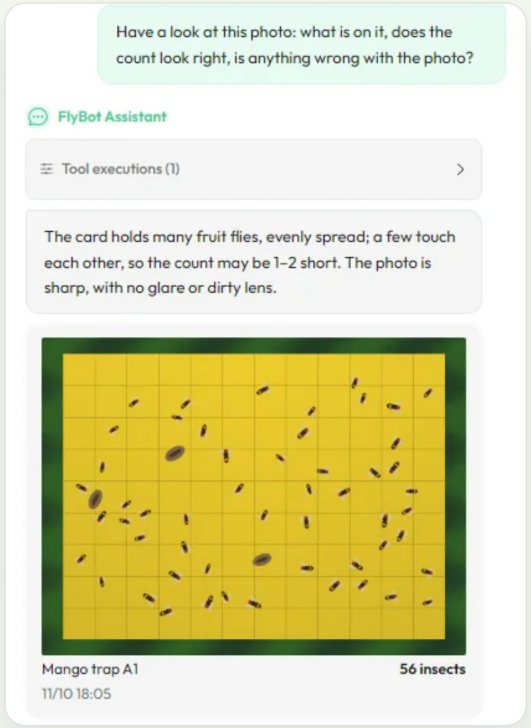

Latest AI photos

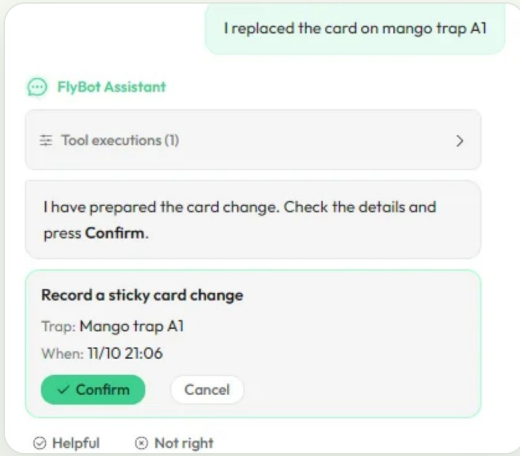

Charts in the chat

Ask about a photo

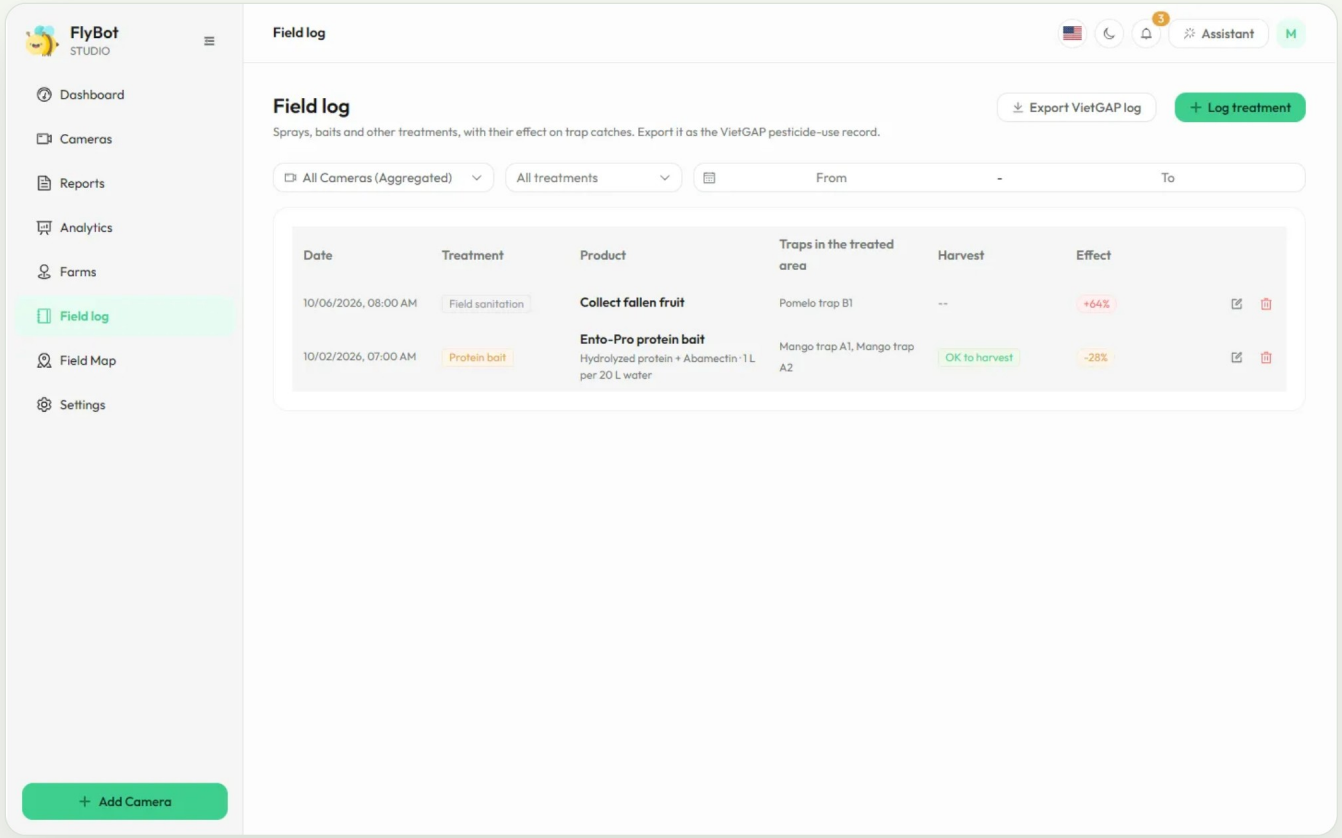

Saved on your Confirm

FARMS, MAP AND LOGBOOK

See which treatments really work

Farms, plots and map

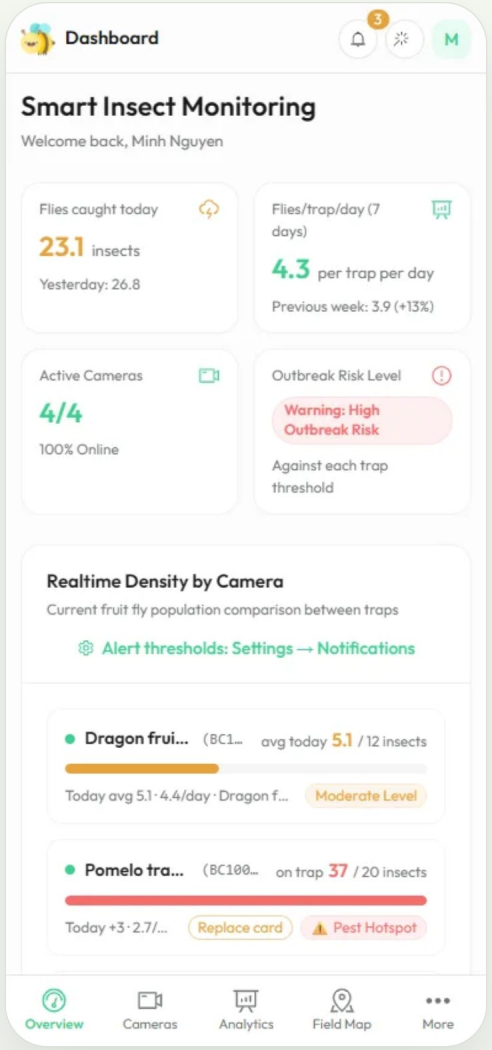

Traps belong to plots; a heat map shows the pest hot spots.

Treatment log

Every spray or bait, with its measured effect on catches.

VietGAP record

Export the pesticide use record in the VietGAP layout.

PHONE AND TEAM

The whole team on board, each with the right access

Installs like an app

Works on the phone with push notifications, in English and Vietnamese.

Connects to your systems

API keys and webhooks to bring the data into your own software.

Roles

Admin, manager, viewer; share single cameras or a whole organization.

Operations in view

An activity log and a capture pipeline monitor for admins.

GET STARTED

Three steps to your first self-reporting trap

01

Mount a camera on the trap

An EZVIZ camera facing the sticky card or the lure trap.

02

Add it to FlyBot

Enter the serial number and verification code, pick the trap kind and schedule.

03

Set thresholds and channels

A threshold per trap; alerts by phone, email and Telegram.
